

# HAKASHI

## Plant Immunity Builder

The product is developed with unique combination of various biological extracts which controls lepidopteran pest attack on paddy and vegetable crops. The product is derived through fermentation technology. The product is specially fortified with organic carbon which imparts system acquired resistance (SAR) to plants, which helps the plant to boost the resistance power against pest infestation.

### Why Choose Us?

At **Maple Orgtech India Ltd**, we are proud to be delivering high-quality organic farming solutions that are eco-friendly, safe, and effective. Our mission is to empower farmers with the tools they need to increase crop yields and protect the environment. We provide innovative solutions like the **Hakashi Plant Immunity Builder**, designed to improve soil health and plant resistance, promoting a sustainable approach to farming.

**Dosage : 5kg/Acre**

### Benefits of Maple Hakashi Plant Immunity Builder:

#### Enhanced Plant Immunity:

Boosts the natural immune system of plants, making them more resilient against diseases, pests, and environmental stress.

#### Eco-Friendly:

Free from harmful chemicals, our products are safe for the environment, ensuring sustainable farming practices.

#### Increased Crop Yield:

By strengthening plants' natural defences, Hakashi leads to healthier crops and better yields over time.

#### Organic Farming:

Ideal for organic farming – our products support eco-friendly agriculture without compromising on quality.
